Education

Krishna Engineering College

2021 – 2025

Bachelor of Technology in Information Technology

Experience

Akacorp Innovative Technology & Trade Private Limited

May 2025 – November 2025

Full-Stack Developer Intern

- Built and maintained backend systems using Node.js, Express, and MySQL, designing and implementing 50+ REST APIs for multiple modules (services, blogs, careers, vehicle workflow, dashboard).
- Designed optimized database schemas and implemented CRUD operations, role-based access, JWT auth.
- Developed dynamic file upload systems (images, documents, media) including AWS S3 integration.
- Integrated backend with multiple frontend websites, converted web app & dashboard into PWAs, and deployed projects on Hostinger VPS/Nginx with SSL.

QSpiders/JSpiders Institute

July 2024 – August 2024

Summer Intern

- Worked on a project-based module, integrating frontend components with backend data using structured CRUD operations and SQL queries.
- Collaborated with team members using version control systems such as Git to organize modifications and assign tasks.
- Participated in end-to-end development tasks, from requirement understanding to feature implementation, testing, and debugging within defined timelines.

Projects

PasteVault | *Next.js, Upstash Redis, Web Crypto API*

- Deployed a zero-knowledge, end-to-end encrypted code sharing platform, implementing client-side AES-256-GCM encryption via the Web Crypto API, ensuring 100% client-side key ownership and eliminating server-side exposure of sensitive data.
- Designed a scalable serverless architecture using Next.js App Router and Upstash Redis, leveraging TTL-based lifecycle management to handle 1K+ requests with optimized response times (<100ms).
- Built secure, rate-limited APIs with IP-based throttling, reducing automated abuse and brute-force attempts by ~90%, while maintaining consistent performance and reliability under high request volume.

JWT Web Tools – Encoder, Decoder & Verifier | *JWT, RSA Cryptography, JavaScript*

- Designed and implemented a client-side JWT utility leveraging the Web Crypto API for standards-compliant cryptographic operations.
- Enabled secure client-side token validation and cryptographic operations without backend dependency.
- Supported JWS (HS256, RS256, PS256) and JWE (RSA-OAEP + A256GCM) workflows including signing, verification, and decryption.
- Implemented RSA keypair generation, JWK sanitization, and PEM/JWK conversions to simulate real-world token validation scenarios.

Job Hoarders | *React, Express.js, Node.js, MongoDB*

- Developed a full-stack job portal supporting recruiter and job-seeker workflows, including job postings, applications, dashboards, resume uploads, and advanced filtering.
- Designed and implemented RESTful APIs handling 50+ simulated user interactions, enabling efficient data flow for job listings, applications, and authentication.
- Integrated a real-time chatbot (Botpress) to automate FAQs and user support, reducing manual query handling by ~40% during testing.
- Implemented secure authentication and role-based access control (JWT + RBAC), protecting user data and restricting access to authorized recruiter/job-seeker actions.

Technical Skills

Languages: JavaScript, C, SQL, HTML/CSS

Technologies/Frameworks: React.js, Node.js, Express.js, TailwindCSS

Tools/Databases : MySQL, PostgreSQL, AWS S3, Git
